Account user guide:

- First you will need to go and create a mysql database with name westernacher

- Then you will need to run the main class WesternacherSpringBootApplication.java as java application

When the application has started go to http://localhost:8080/

Initially there is no data in the database. However you can go and add new accounts, update and delete them. First and Last Name should be between 1 and 15 size, Email address should be valid and the date should follow the following format 1990-05-20. The accounts should look like this when added.

Ivan	Ivanov	ivanivanov@gmail.com	1990-05-20 00:00:00	Update Delete

Alternatively just run spring boot application with the following command in the project structure:

```
$ mvn spring-boot:run
```
